Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-14, drawn to a solution for forming a tin alloy layer, classified in class 106, subclass 1.22+.
 - II. Claims 15-18, drawn to a method of coating a surface with a tin alloy layer, classified in class 427, subclass 436.
 - III. Claim 19, drawn to a layered product comprising a tin alloy layer, classified in class 428, subclass 626.
2. The inventions are distinct, each from the other because of the following reasons:
3. Inventions of Group II and of Group III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product can be formed by sputter depositing the tin alloy bonding layer.
4. Inventions of Group I and Group II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product of Group I can be used in a process to form a layer that lacks copper on its upper surface and/or that further bonds to ceramic.

5. Inventions of Group I and of Group III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions relate to an aqueous solution that lacks many of the ingredients of the laminate article and that contains bonding layer alloy components in dissolved state and to a solid laminate article of defined strata.
6. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
7. Because these inventions are distinct for the reasons given above and the search required for each of the Groups I-III is not required for each of the others of Groups I-III, restriction for examination purposes as indicated is proper.
8. A telephone call was not made to Mr. Mueller to request an oral election to the above restriction requirement.
9. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
10. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship

Art Unit: 1775

must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
